## Laryngoscope Blades (Sterile, Single Use)

TF:120b

**Intended use:** The segment of a laryngoscope (i.e., rigid intubation type) intended to be inserted into the oral cavity to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It is connected to the laryngoscope handle and illumination of the airway is provided by a small built-in light bulb or a fiberoptic light. This device may be curved or straight and of various designs and lengths; it may be hinged/interchanged with the handle. This is a single-use device.

## Laryngoscope (Sterile, Single Use)

TF: 120a

**Intended use:** A hand-held disposable device intended to be used by anaesthesia/emergency service personnel to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It has a handle containing batteries to power its light (a small built-in light bulb or fibreoptic light) for airway illumination, and a curved or straight blade of various designs and lengths that can be hinged/interchanged or integral. Some types are magnetic resonance imaging (MRI) compatible. This is a single-use device.

## BritePro Solo Evo Laryngoscope (Sterile, Single Use)

TF: 120a

**Intended use:** The segment of a laryngoscope (i.e., rigid intubation type) intended to be inserted into the oral cavity to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It is connected to the laryngoscope handle and illumination of the airway is provided by a small built-in light bulb or a fiberoptic light. This device may be curved or straight and of various designs and lengths; it may be hinged/interchanged with the handle. This is a single-use device.

## Stylet – Tracheal Intubation Aid (Sterile, Single Use)

TF: 109

**Intended use:** A sterile, long, stiffening wire/rod designed for insertion within the lumen of an artificial airway tube (e.g., endotracheal tube, bronchial tube) to stiffen and/or maintain the shape of the tube to facilitate introduction (intubation). It is designed to be slightly shorter than the tube to avoid damage to the airway during passage and is withdrawn after intubation has been completed. This is a single-use device.

## Non-Drainable Bags (Sterile)

TF: 19b

**Intended use:** A sterile flexible plastic pouch designed to connect to a urinary catheter to collect discharged urine from a patient; it is not designed with an opening for urine drainage. The device is not directly attached to the patient and is disposed of when full. This is a single-use device.

## Vaginal Speculum (Sterile, Single Use)

TF: 27

**Intended use:** A hand-held manual instrument intended to dilate the vagina after insertion, typically for visual examination of the vaginal canal and cervix and/or to perform a gynaecological procedure. It typically consists of two long blades, joined at a handle at one end, that are inserted into the vagina in a horizontal position and then opened to form an angle, or it is a soft-material device inflated after insertion that allows viewing and access through a central channel. It is typically made entirely of plastic materials or has removable blades made of plastic. This is a single-use device.

## Classic - Intermittent Urinary Catheters (Sterile)

TF: 117a

**Intended use:** A sterile, flexible tube intended to be inserted one-time through the urethra to the urinary bladder, by the patient/user or a healthcare provider, to provide urine drainage, typically for an individual who is physiologically incapable of voiding. It is typically made of polyvinyl chloride (PVC), and may be coated with a lubricating substance (e.g., acquires a smooth and mucous surface when brought in contact with water). The distal end can have various tip designs [e.g., open-ended, rounded with a side-hole(s)], and the proximal end typically connects to a urine collection container. This is a single-use device.

## Meatal Dilators (Sterile, Single Use)

TF: 116

**Intended use:** Meatal Dilators are intended for use on adult and paediatric individuals who have strictures/narrowing of the meatus, which include meatal stenosis and meatal strictures near the opening of the urethra. Strictures/narrowing of the meatus can lead to a poor stream of urine or spraying when passing urine, difficulty in passing urine and having to strain or taking a long time to empty the bladder. Meatal Dilators are intended to dilate the opening of the urethra to allow the patient to pass urine naturally or subsequently use a catheter. Meatal Dilators may be used in hospital and home environments. The device is intended to be used by trained users. Meatal Dilators are to be used for a maximum of 5 minutes and are single use. Once the device is removed it should be disposed of. Flexicare's Meatal Dilators are intended for use in adult and paediatric individuals who have strictures or narrowing of the meatus or urethra.
